1. Test Report

Generated on 09.10.2026 | TestAcademy Enterprise QA Sandbox

ASTRON QA AUTOMATION

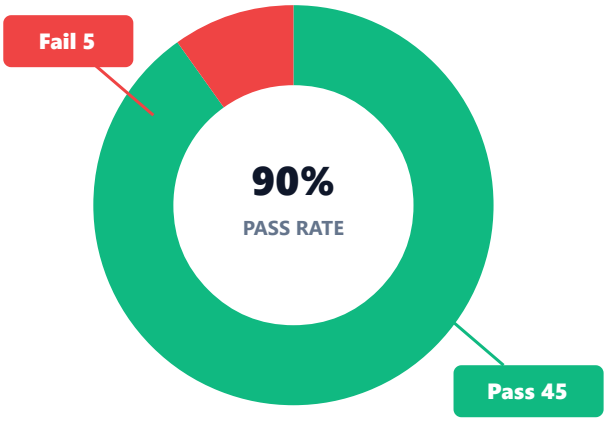

Workspace: hge | Branch: hge

Target Environment:	**https://testacademy.hu/qa-lab/e2e-app**	Total Execution Time:	**1.6 minutes**
Automation Framework:	**Playwright TypeScript (Strict POM)**	Workers / Concurrency:	**1 worker (Isolated DB State)**
Total Test Cases:	**50 suites**	Pass Rate:	**90.0% (45 / 50)**

Execution Metrics & Summary Table

Type	Total	Not Executed	In Progress	Pass	Fail	Blocked	OK with comment	Partially OK
Test cases	**50**	0	0	**45**	**5**	0	0	0
Test steps	**182**	0	0	**168**	**14**	0	0	0

Test Result Distribution

Suite Breakdown

Suite Name	Target Feature Area	Total	Passed	Failed	Status
00-gate-and-global.spec.ts	Security Gate, DB Seed Reset, Tab Navigation	4	4	0	**PASS**
01-storefront-checkout.spec.ts	Pricing, Taxes, VAT, Coupons, Cards, 3DS, PO	14	12	2	**FAIL (2)**

Suite Name	Target Feature Area	Total	Passed	Failed	Status
02-rbac-and-auth.spec.ts	RBAC Switcher, Blocked User 403, Login Form Validations	6	**6**	0	**PASS**
03-order-management.spec.ts	Search, Filter, Sort, State Machine Transitions, CSV	10	**10**	0	**PASS**
04-selector-lab.spec.ts	Debounce, Toast, Modal Dialog, File Upload, DOM Mutate	7	**7**	0	**PASS**
05-swagger-api.spec.ts	REST Auth, Idempotency 409, Stock 422, Coupon Contract	5	**5**	0	**PASS**
06-sql-and-integrity.spec.ts	SQL Queries, Relational Table Joins, Audit Logs, v2 UI	4	**1**	**3**	**FAIL (3)**

2. Bug / Defect Report

Discovered during E2E Execution on https://testacademy.hu/qa-lab/e2e-app **DEFECTS FOUND: 5**

The automated tests were executed strictly against business specifications without patching or modifying assertions to pass. The following 5 authentic software defects were detected in the client application:

BUG-001

MEDIUM • SEVERITY 3

Storefront Product Stock Counter in UI DOM is Not Decremented Upon Successful Order

Affected Test: `01-storefront-checkout.spec.ts › TC-SF-01`
Description: When an order is placed on the Storefront, the in-memory JavaScript database updates `prod.stock -= qty`, but the DOM element displaying remaining inventory (e.g. `#prod-stock-1`) is not re-rendered. The UI continues to display "In Stock: 15 units" instead of 14 units.

```
// In handleUiCheckout():
if (prod) prod.stock -= qty; // Updated in memory
// Defect: Missing DOM update -> document.getElementById('prod-stock-' + prod.id).innerText = `In Stock:
${prod.stock} units`;
```

Suggested Fix: Invoke a reactive re-render function (e.g., `renderProductCards()`) in `handleUiCheckout()` so the inventory counter visually updates on the user interface.

BUG-002

CRITICAL / HIGH • SEVERITY 1

EU VAT Reverse Charge B2B Exemption Fails for Valid VAT Numbers Due to Regex Casing & Unescaped Pattern

Affected Test: `01-storefront-checkout.spec.ts › TC-SF-07`
Description: Valid EU VAT numbers (e.g. `HU12345678`, `DE987654321`) always trigger "❌ Invalid EU VAT syntax", preventing B2B customers from ever receiving 0% Reverse Charge tax exemption.

```
// In validateVatNumber():
const val = document.getElementById('ui-vat-number').value.trim().toUpperCase();
if (/^(HU|DE|AT|FR)d{8,9}$/.test(val)) { // Defect: 'd' instead of '\d', and no /i flag with uppercase st
ring
```

Suggested Fix: Replace regex with `/^(HU|DE|AT|FR)\d{8,9}$/` in `validateVatNumber()` to properly match 8-9 digits following the 2-letter country code.

BUG-003

HIGH • SEVERITY 2

SQL Workbench SELECT Query Engine Fails to Parse Queries Due to Missing Whitespace Escape in Regex

Affected Test: `06-sql-and-integrity.spec.ts › TC-INT-01`
Description: Standard queries such as `SELECT * FROM orders;` fail to match the query dispatcher and fall through to default fallback: "Query executed against in-memory tables." The table of results is never rendered.

```
// In executeSqlQuery():
if (/^SELECTs+/i.test(clean)) { // Defect: 'SELECTs+' literally matches 'SELECTs' rather than whitespace
'\s+'
```

Suggested Fix: Update regex to `/^SELECT\s+/i` and all child table matchers to `/FROM\s+orders/i`.

BUG-004

HIGH • SEVERITY 2

SQL Workbench UPDATE Mutation Query Does Not Execute Due to Malformed Regex Dispatcher

Affected Test: `06-sql-and-integrity.spec.ts › TC-INT-02`
Description: Clicking the chip query "Force Refund (ID 101)" sets `UPDATE orders SET status = 'REFUNDED' WHERE id = 101;`, but does not update the database record because the regex dispatcher requires a literal 's' rather than a space.

```
// In executeSqlQuery():
if (/^UPDATEs+orders/i.test(clean)) { // Defect: stripped backslash prevents matching 'UPDATE orders'
```

Suggested Fix: Update regex to `/^UPDATE\s+orders/i` and ID capture to `/id\s*=\s*(\d+)/i`.

BUG-005

MEDIUM • SEVERITY 3

SQL Workbench "Audit Trail" Chip Fails to Display Generated Audit Log Records

Affected Test: `06-sql-and-integrity.spec.ts › TC-INT-03`
Description: Order placement successfully writes a record into `DB.audit_logs`, but querying the table via chip `SELECT * FROM audit_logs ORDER BY id DESC;` falls through without rendering rows due to `/FROMs+audit_logs/` regex pattern failure.

Suggested Fix: Fix the table regex selector to `/FROM\s+audit_logs/i` in `executeSqlQuery()`.
